

WE550 Wind Speed Sensor

Rugged Wind Speed Transmitter

Description

Global Water's highly accurate WE550 Wind Speed Sensor is constructed of high-impact materials, ensuring its durability and ruggedness even in severe weather conditions. The sensor has a very low threshold, so it responds accurately to subtle changes in wind speed. The sensor is molded to 25' of marine grade cable, with lengths up to 500' available upon request. The sensor's output is 4-20 mA with a two wire configuration. The unit's electronics are completely encapsulated in marine grade epoxy within a rubber sleeve.
